There is a 20 year gap past the requested, and yes:

Requested Date Limit:
August 4th 2026

Limits for dates that you can go back in time to:
August 14th 2011 (20 year gap when you reach August 14th 2031)

Eligibility and time limits

1. Minimum age

A person must be at least 16 years old to request authorization for a do-over. Meeting the age requirement does not guarantee approval; all other safeguards and authorization requirements still apply.

2. Biological descendants

The requester must have no biological descendants to qualify to request a do-over. This condition should be applied consistently and with respect for personal privacy.

3. Earliest permitted date

Before August 14, 2031, a proposed destination date must not be earlier than August 14, 2011.

4. Twenty-year cap

Beginning August 14, 2031, the destination date must be no more than 20 years before the departure date. For example, a departure on August 14, 2031, could not go back earlier than August 14, 2011.

If you want to use the time machine within 20 years, here are the rules:

1. You can’t risk erasing anyone from existence
2. You can’t risk changing the course of public history
3. You can’t change technological advancement
4. You can’t change the creations of any apps, websites, or anything like that
5. You can’t change Google Maps, and other technology based things
6. You can’t change the creations of shirts, designs, or anything like that or commercials
7. You can’t change museum based history and evolution
8. You can’t change birth records or stories
9. You can’t change religious texts, songs, prayers, or anything like that

10. You can't change any famous or museum-based art or stop it from being created
11. TV shows, movies, songs, all music, and other stuff are automatically protected as long as they are public and are used to make up memories. If privately written, then you don't have to write it
12. Music history, statistics, and other stuff are protected
13. It is important not mess with songs, TV shows, movies, and other stuff
14. You cannot change
15. You cannot erase any historical figures, famous celebrities, or change the course of anything like that
16. You can't change things like imdb, Etsy, and other sources that made up the wonderful routines of our lives, or anything like that when it comes to things being advertised
17. You can't change the technological advancement of backwards time travel's inventions. There might be reasons for the need of it, so don't shut it out completely, especially if there was a moment in time where everyone in the world or that situation wished they had a time machine
18. You cannot change the course of any special historical events documented in history (though you can find alternatives)
19. You cannot erase mistakes without an alternative of learning what you learned from them
20. Due to how cause and effect works, you can not mess with anyone Internet famous (past or present), and there are always butterfly effects, so you can't mess with anything that made up our good memories either because there are factors involved, so if one thing weren't to happen without something else being crated, you can't mess with that
21. It is important that a person is taught to learn in a certain way such as having discipline, or they'd be okay with living a life where they learn by doing
22. You can't erase the creation of any books, pamphlets, vacation places, hotels, houses, TV shows, movies, plays, musicals, songs, non-regrettable memories, etc.
23. The "Noun" law. You can't erase people, places, things, etc. from existence as the world is changing around us
24. You can't mess with bar/bat mizvahs, confirmations, ceremonies, and other special out there events
25. You can't mess with concert performances, programs, and other stuff, so you need to have the same songs, soloists and other things. You can add new stuff and events though if you wanted to, or add celebrations, lunches, and other stuff, depending on whether or not it risks a major butterfly effects. Oh, and depending on a ton of factors and the feelings of everyone else, you can change who is in the performance (as long as they wouldn't solo a song that wasn't in the original program or play a major role that would be recognizable), but that depends on the attachment to the program itself and historical preservations of it.
26. It is important to consider events and memories and other things in a program
27. You can't go back in time if you have at least one biological descendant
28. If at least one person couldn't imagine life any differently, that area becomes protected. If they are okay with the change, that use is helpful

29. Note that when it comes to these important memories, not only are they protected but so are anything that made that possible, unless there is an alternative to how it still is
30. Due to the plot of Every Witch Way Season 4 and the Emma and Daniel storyline, you can't change anything like programs, other stuff, quit earlier, etc. before August 1st 2015.
31. It is important that you can't change the course of history
32. You can't risk any butterfly effects. Above all that must be protected. However, if your plan is to create positive ripple effects it can be allowed
33. It is heavily important that you don't risk any happy memories (However they can be created differently or one can be erased if the same one was already created at least twice)
34. You cannot change public history, or things like that
35. You can't mess with nature, how that works, or anything like that. And yes, there are several documented things that must be kept constant
36. Not only can you not risk messing with any protected territory, but you can't risk messing with anything that made up or led up to those memories, and you can't change biology or order of things either
37. You cannot mess up with what led to the reproduction of each organism, or what makes up their genetic makeup. You can't mess with
38. You can't mess with news stories, and stuff that is publicly reported, and you can't mess with articles, map topography, restaurant building, etc.

Exceptions:

1. If done within seven years, you can erase, or at least shorten pandemics, however you must have alternatives to anything that came through it. If it's the COVID-19 pandemic we are talking about, it can be shortened. Global pandemics are something that aren't the most healthy thing and closes off memories, milestones, etc. but yes, I think it is important that you consider the risks too
2. You can change census records if you were to do what's best for everyone, or the regret relates to going to college instead of living in an apartment, but the use still needs to be approved
3. You can change the mapping of colleges and other stuff if there are situations that are capacity-related and it risks some unhealthy environment, and it is what's best for any organism or anything or anyone living in it at the time
4. If your goal is any changes in history prove to be what's best for everyone, then you will need to adjust and deal with the changes, however whether being able to do so in the past (Although the rules must be abided by) are how attached people are to the memories

So basically the rule is:
Do what's best for everyone without anyone having to live with the consequences, and adjusting wrinkles in time is helpful in situations where it is worse keeping the timeline the way it is than not.

What if a person has an extreme psychological case when needing one?
I think if a person never gives up on wanting a time machine and desperately looks into research, often inspired by the mirroring cinema-therapy of time travel movies then you have your answer:

So if a person psychologically is clinging to the past, it is important to recognize why instead of just assuming they would be unhealthy, if this were true:

1. Ask about what their use is for
2. Scan their memories and determine what they have finally recognized and do a Temporal GIS check, despite knowing that a time reverse is what's best for everyone, it is important to consider it. However, even if people have a psychological reason for backwards time travel doing what's best for them, temporal laws still apply to them because some people can't afford the risk. It is all
3. Depending on what the use is for, make sure it is explained why it is what's best for everyone
4. It is important to listen to and take what they are saying seriously. You can use a lie detector to determine any unfair uses and if they are breaking the rules
5. Temporal rules still apply to those people, but you can see if
6. Is it important that if they were to adjust wrinkles in time, they are able to do so in a way that automatically and naturally goes into the point where any good memories aren't messed up. Even if there are alternative solutions
7. Whatever mistakes you did made need to be part of a dream you had when returning for a do-over. That is what's important
8. If you had a do-over, you can't risk with anyone else's non-regrettable memories that you were a part of it, so depending on what your goals are, you need to ensure a timeline where doesn't happen
9. Due to psychological problems, now it is more about if people could imagine life any differently, but yes I think that if you found a phone in a bathroom, posted something that you didn't show your face in or voice in, donated money, or did something else, or it rather depend on the life you had, it would depend more now on if the people could imagine life any differently. But hopefully you would be surrounded by people who love you and wanna do what's best for you, but you need to find alternate solutions. But yes, as long as you are okay, we're fine
10. If you are able to go back in time ensuring you have everything covered, or the people you care about either don't care as much as things changed or are able to make sacrifices that they wouldn't miss, or if this could also benefit them too, that's what's going to help. But yes, while it is great that this is what's best for you, you need to make sure your alternate life plan, naturally speaking isn't going to lead anyone else to live with consequences they can't risk living with, along with it violating time travel rules

Time Machine Legality:

It is illegal to have the following types of time machines:

1. You cannot send a traveler back without full protection to make sure the traveler is alive
2. You must have a patent and permit with a fully tested time machine so the use of it is safe
3. Lie-detecting technology will be enabled to determine this: Your use of a time machine c

Now you can use it for a lot of things if it's GIS approved. You can use it for anything except for the following things:

1. Committing murder
2. Committing criminally illegal acts (stealing, assault and battery attacks, etc.)
3. Use it to violate rules or laws that already exist there, or are made for ethical, helpful, and balanced reasons
4. Using it to blackmail people in an unethical way
5. Using it to take advantage of people, fake death, or do stuff like make money off of being psychic
6. Using future information to gamble, cheat, lie, etc.
7. Rigging lotteries, movie showings, or anything that takes away from something else's good non-regrettable memories
8. Causing damage to the timeline or the memories or lives of others
9. Ruling the world and finding ways of destroying the government to do so
10. Destroying people, places, or things that made up the good memories of others
11. Erasing someone from existence
12. Changing the course of history
13. Messing with lives and protected memories (non-regrettable lives) on purpose
14. Using it for theft or murder
15. Using future knowledge to buy stocks
16. Bringing back future technology or goods
17. You cannot use it to create any new damage. You need to follow rules, laws, and more. Although backwards time travel is about following temporal law (Not risking anything worse or putting people at risk that was already great), not about criminal law alone. But yes, it is possible that committing new crimes (depending on what the crime is), could have further consequences. However, for several reasons it is important that temporal law is about not risking anything that was already great. But yes, if you go back in time, you will not be allowed to violate any rules and laws that are guaranteed to lead to natural consequences, nor can you create any new situations. Real life non-travel stuff has cause and effect consequences, so forbidden rules and laws of it, aren't violating that alone. It is important to consider the consequences. It is also is important not to risk people getting hurt that weren't before. For several reasons, I wouldn't suggest going

back in time on the condition that you completely behave, but rather not doing anything that ends up risking further damage to already good lives and memories.

18. And yes, you cannot risk interfering with protected areas.

You also cannot violate other rules and laws that are there to protect from natural consequences. Obviously, that would need to be forbidden due to what they are for. And there are things that can't be messed with.

Due to this there is a protocol:
For a legal time travel use you need to bring back non-invasive memory erasing technology. If your do-over use is approved, you won't remember anything. You will just feel tempted to do everything you needed to do in your do-over while convinced everything was all a dream. Meaning you need to lack future information if you were to go back.

So how do you ensure learning life lessons?
It is important to learn lessons related to loss, death, acceptance, maturity, and further things. A time machine can be used to prevent mistakes that lead to the loss if you were responsible for them, however it is no substitute for learning the life lessons that relate to what a time machine can't help you with:

- Owning up to your mistakes
- Listening to other peoples' way of thinking
- Accepting death as a part of life
- Accepting you aren't perfect
- Accepting loss
- Accepting that friendships can end (even though they never have to)
- Accepting heartbreak
- Making your mistakes
- Accepting embarrassment
- Understanding that jealousy is a part of life
- Accepting the reality you are living in
- Learning flexibility
- Being an ethical person
- Accepting other decisions
- Accepting letting go
- Accepting things are out of your control
- Doing things the non-technological, non-cheating time way
- Accepting that you won't always getting what you wanted
- Moving forward to do better instead of continuously trying to prevent mistakes
- Accepting bad things happen (The world isn't perfect)

- Accepting the world for what it is
- Accepting the past for what it is
- Accepting history for the way it happened and how

(Time machine or not. Those are important life skills to have/gain):

So does that mean you could use a time machine for stuff like preventing mistakes, changing your life path, suggesting other ideas, and other things happening?
Of course. As long as you follow the temporal code: Do what's best for everyone but no one would have to live with the consequences is still strictly followed. It is important that you don't use it to commit crimes, which are just as expense based as if you've done so in real life, and if you were to do anything fun, mischievous, wrestling based, letting down your guard, etc. and you wouldn't cause any new traumatizing damage, both having learned from the mistakes you are trying to prevent and more, you are safe. But you can't use future information and you cannot risk getting rid of anyone's non-regrettable memories. Making your own can't mean messing with that. But yes, you cannot do anything new that is:

1. Criminally illegal (Only has natural consequences)
2. Traumatizing and bad for all involved
3. Non-beneficial for anyone else
4. Destroy anything that is already or was already perfectly good in the past
5. Breaking rules or laws (Specifically those that have natural consequences that only risk damage)

So does the rule of needing to be perfect change if you went back in time?
You can make mistakes if you go back in time, even by accident. However, if your mistake does lead to some butterfly effect or crosses into that territory, that's when it's not worth it.

And no threat to national security?
Yes. It is important that any uses of a time machine that could be a threat to national security (Especially when there wasn't one before), that is when that use is forbidden, which is why you would need the "Pass", "Fail", or "Script" things. But since laws are created for a reason, ones that prove to have natural consequences are ones that need to be prevented if anything is created new ones.

You also can't use backwards time travel as a way to get smarter about doing things like stealing, destruction, or breaking other laws or be a threat to national security. That is also protected. However, this only applies to criminal law (stealing, crashing planes, murder, and other things that would be threats to national security).

Crime Prevention:

1. You can use it to prevent crimes, but the lie-detector must prove that you are doing this because you want to prevent damage, not because you are finding excuses to do it all over again and this time fly more under the radar
2. If you did do stuff like stalking, harassment, stealing, etc., then as long as you won't do it if you went back in time, then the use can be approved. However, if anyone benefited from the crime in any way, you have to find alternatives
3. If you are preventing traumatizing situations, stalking behavior, or things like that, undoing the crime actually makes it one step closer to safety, so it is an approved use, and since criminal records can affect stuff in the future anyhow, undoing that stuck thing can still be a good use of it.
4. If you had done stuff that was illegal that you wish to undo, that can be a good use of it depending on if anyone benefited from it or if you went to jail. If you didn't go to jail but you still wish to prevent that proving your guilt, it could be allowed then
5. If you are undoing stalking, harassment, etc. then they are helpful things to prevent if you went back in time because the world is one step closer to safer, as well as relationships being one step closer to better
6. And yes, I think that if the GIS scanner hears of any crimes, or finds out about police involvement, whether or not it went on your record, you wouldn't get arrested for it the second they found out, especially if you are willing to undo it
7. Please note that if there were a federal crime committed in the past that you can't undo, that no government or anyone should prosecute you for it, and no one is going to be reported to anyone unless there is proof you have an intent to fly under the radar or commit more crimes now
8. Please note that if any government did a GIS check or reported any crimes, Temporal law says that you can go over the details, but you can't prosecute anyone without your goal being proven to cause more damage. The NDA also includes a "No rat-out policy" which means that if people scanning it found out anything someone else did that flew under the radar, that couldn't be reported to the authorities or anyone.
9. You can erase any criminal acts you did as long as they weren't broadcasted, used for a school project, or the plot of a TV show or movie, or wasn't publicly documented and no one benefited from it in any way.
10. It is important that erasing crimes is helpful in cases too. If a person wanted a time travel do-over, you can't make them afraid if any crimes were detected, plus if a crime was committed that means damage was done and undoing it would just mean that any bad things that happened from it, weren't. So while important to consider intent and use a lie-detector. That's what's going to help.

Mischief/Hijinx/Bad Acts:
If your time machine use included that stuff, it wouldn't be a temporal law problem so it could be allowed. However, if you do stuff like pranking, prank calling, sneaking out to a party, or other stuff, it is important to consider the butterfly effects of doing so as well as not letting it cause any permanent damage or harm that could have a major effect on things happening. If you did take candy from a candy store when you didn't before that can lead to new consequences for you if you get caught, however I think it is important to consider the following butterfly effects:

1. Now while businesses can lose money, it is important on how much
2. Obviously if a person did do stuff like traditional hijinx, it depends on the butterfly effect. You cannot force a person to be 100% ethical with a time machine either. It matters more about if it hurt protected territories or is a threat to national security
3. You cannot use a time machine to hurt people, You can't create a bad situation like that if it led to permanent damage and your intent was to hurt someone. So like if you did stuff like wrestling, arm-pulling, or doing science experiments, they would have to be safe, especially if good things happened to you afterwards
4. You cannot suggest serious damage or law-breaking of anyone, especially something that leads anyone to live with the consequences
5. If a person were to do hijinx, pranks, or mischief it must contribute to a non-regrettable life of that person or all people involved and it mustn't prove to cause permanent damage to the good life true for all of you, and it mustn't be a threat to national security
6. You cannot commit any crime that violates temporal code, or that leads to anything public, erasing someone from existence, or changing the course of history

You cannot be a threat to national security or create anything where people have to live with the consequences if you were to go back in time and you can't create a situation where anyone would have to live with the consequences people couldn't afford to live with. But in situations that are minor and not a threat to national security, history, or non-regrettable lives, it is about the wants of the situation or wishes of it from people involved, not the ethics regarding the uses directly. But yes, you can't go back before August 14th 2011 for various reasons. By then laws were already in place to prevent threats to national security. So that capped date is important for a reason.

I think any future government can come up with the rest of everything else considering what would be needed for time travel. But they have to consider everything clearly needed for time

travel do-overs to avoid pressure. And we focus on butterfly effects. If a federal crime undetected is discovered, apprehension and prosecution aren't going to happen solely because Temporal Law dictates stuff related to the butterfly effects of it, not a new mystery they are trying to solve.

And listen, depending on attachment to memories, if people like the pictures, etc. if people re-did their memories in a way that was publicly recorded it depends on how attached people are to the memories or if they were major records and/or events that people couldn't imagine life without.

Oh, and FYI we need the complete reassurance of people trying to live their lives:
You can always spend time going out there making new memories, growing up, having fun events and more. And because psychological make-up is read, all of your past memories will be protected. As for going into the future, you can always keep living your lives, doing things, and making new memories. The time machine is for people who do have regrets, regret mistakes, or other things, and they would only allow those wrinkles in time to be adjusted. They won't mess with anyone who is non-regrettably happy which people won't ever be if they don't move forward. Just remember that you are always safe and that you should focus on moving forward, learning, growing, thriving and doing so much more when living your life. And don't worry, no one has to worry about their good memories being gone forever because they are always going to need to be protected. It wouldn't be helpful to need a time machine unless it's under extreme psychological conditions, and how even if wrinkles in time are adjusted, they would usually be for small situations that either would help you, if your vote counts, or everyone else's. But don't worry, no one is going to go back in time without you being considered. And yes, I think that growing up means a lot of things for adventures, options, and way more fun over the years which is always helpful. And yes, nothing is going to change. I also promise that whatever makes up memories we can't live without we won't do it, and it is best that you keep living your life or you'll feel you'll need a time machine. And yes, the 16 year old thing is there for a reason. Kids need to learn to grow, learn from their mistakes maturely, and gain the maturity so it is best to keep encouraging that, but time machines prevent certain things and the rest including things you couldn't imagine life without is always protected. There's also a 20 year cap for a reason and almost no one resorts to that anyway or does so. So we move on, move forward, and connect and live a non-regrettable life because there would always be a reason why you were born. And time machines aren't to threaten your beautiful wonderful memories or dictate whether you should live your life or take leaps of faith. They are here to help anyone who needs it to help do what's best for everyone, but they would rarely be used. But yes, this has to be kept secret for many reasons.
